Andrew Dai

AI + Full-Stack Developer | 10 Consecutive Hackathon wins

andrewdai.dev@gmail.com | andrewd.ai | linkedin.com/in/andrew-dai-dev | github.com/PenguinPush

Education

University of Waterloo Expected May 2031

Bachelor of Computer Science with Minor in Physics *Waterloo, ON*

Experience

JAMHacks Aug. 2025 – Sep. 2026

Head Organizer, Lead Software Engineer, Judge Panelist *Waterloo, ON*

- Built jamhacks.ca using **React + Node.js + MongoDB**, serving **12,000+ monthly visits** and **1,000+ registered users**
- Scaled Canada's largest high school hackathon, increasing **attendance by 41.5%** in under a year on a **$15,000 budget**
- Reviewed **576 commits** for clarity and maintainability, providing code review feedback to a **team of 5 engineers**
- Coordinated and worked with engineers from Google, Meta, Apple, & Microsoft to judge **100+ student-built projects**

Cullergrader (Open Source) May. 2024 – Present

Developer & Maintainer *Toronto, ON*

- Built an open source tool to bulk sort similar photos by **perceptual hash**, designed to handle large folders of **100GB+**
- Generates **24-byte hashes** per photo, converting to LAB color space and comparing hashes to compute visual similarity
- Implemented configurable multi-threading to process large batches **up to 64x faster** than single-threaded alternatives

Hackathons Dec. 2022 – Present

Competitor, Judge Panelist, Mentor *Canada*

- Won **10 consecutive hackathons** out of 18 attended, shipping and pitching full-stack products in **under 24 hours**
- Awarded **$4,000+ in prizes** for technical solutions built on **Databricks, MongoDB, Cohere, & Roboflow** APIs
- Finalist for **Major League Hacking's** annual **Top 50 award**, an international organization of **150,000+ members**

Projects

Semantic Species Retrieval *– OpenAI, Google AI Platform, Flask, Next.js, SQLite*

- A scalable animal identification pipeline that supports 9,641 species, **366% more than Google SpeciesNet's 2,066**
- **Eliminated per-species costs** by mapping visual traits to embeddings, new species can be added without extra training
- Published an animal-information dataset covering 9,641 species on **HuggingFace**, earning over **100 downloads**

Physics-Informed Shuttlecock Tracking *– YOLOv8, LiDar, Roboflow, Next.js, Flask*

- Tracks fast-moving small objects (**0.024% of frame area**) in 3D space using **motion isolation** and **trajectory modeling**
- Designed a rudimentary **real-time world model** with gyroscope-calculated gravity data and **live court segmentation**
- Combined LiDar sensors with **depth estimation models** for reliable spatial positioning with respect to camera extrinsics

Agentic Workflow Prototyper *– Google AI Platform, Moorcheh.ai RAG, Flask, MongoDB, Next.js, Supabase*

- Built a **tool-based agentic system** to build executable API workflows using a custom drag-and-drop node system
- Integrated Moorcheh.ai **high-speed RAG** for **vector retrieval 6.6x faster** than Pinecone + Cohere reranking pipelines

Skills

- **Languages:** Python, JavaScript, TypeScript, HTML, CSS, C++, C#, Java, Racket
- **Frameworks & Libraries:** Flask, React, Next.js, Tailwind, PyTorch, NumPy, Pandas, OpenCV, LangChain
- **Development Tools:** Git, Claude Code, Codex, GCP, AWS, Docker, Terraform, Postman
